How to get the full system built in 14 days

01 The Silent Revenue Leak

Every single day, potential customers visit your Shopify store. They browse your products. They add items to their cart. They start the checkout process. And then... they leave.

No follow-up email. No reminder. No attempt to recover the sale. The money just walks out the door.

Let's put real numbers to this. If your Shopify store does \$20,000/month in revenue, that means approximately \$46,000 worth of carts are being created each month (since your \$20K represents roughly 30% of attempted purchases). Even recovering just 10% of those abandoned carts would add \$4,600/month to your bottom line.

That's \$55,000 per year. From a system that costs nothing to run once it's set up.

THE REAL COST OF DOING NOTHING

Every day without email automation isn't just a missed opportunity — it's money actively leaving your business. A store doing \$20K/month is losing approximately \$150/day in recoverable abandoned carts alone. That's before we even count the missing welcome series revenue, post-purchase upsells, and lapsed customer reactivation.

02 The 5 Flows That Print Money

The top-performing Shopify stores all have one thing in common: they've built an automated email system that works 24 hours a day, 7 days a week, recovering lost sales and driving repeat purchases without any manual effort.

This system consists of 5 core email flows. Together, they form what I call the **Revenue Recovery System**. Each flow targets a different stage of the customer journey, and each one generates revenue independently.

1	Abandoned Cart Recovery	5–15% of abandoned carts recovered	<i>Highest immediate ROI</i>
2	Welcome Series	30–50% open rates on welcome emails	<i>Drives first purchases</i>
3	Post-Purchase Follow-Up	20–30% increase in repeat purchases	<i>Builds long-term value</i>
4	Browse Abandonment	10–15% click-through rate	<i>Catches warm leads</i>
5	Win-Back Campaign	5–10% of lapsed customers reactivated	<i>Recovers lost relationships</i>

In the following chapters, I'll break down each flow in detail — what triggers it, what emails to send, when to send them, and what to say. You'll walk away with a complete blueprint you can implement yourself or have someone build for you.

03 Flow #1: Abandoned Cart Recovery

This is your highest-ROI automation. If you only set up one flow, make it this one.

How it works:

When a customer adds items to their cart and starts the checkout process but doesn't complete their purchase, Shopify records this as an abandoned checkout. Klaviyo automatically picks up this event and triggers a sequence of emails designed to bring them back.

The 3-Email Sequence:

Email 1 — The Gentle Reminder (4 hours after abandonment)

Subject: You left something behind at [Store Name]

This email is simple and friendly. Show the exact products they left in their cart (Klaviyo pulls this data automatically). Include a direct link back to their cart. No discount yet — many people simply got distracted and just need a nudge.

Goal: Recover the easy wins — people who genuinely forgot.

Email 2 — Social Proof + Urgency (24 hours later)

Subject: These items are selling fast...

Add social proof — customer reviews, star ratings, or 'X people are viewing this right now.' Create light urgency: 'Items in your cart are not reserved' or 'Limited stock remaining.' Still no discount. You want to convert without cutting margin first.

Goal: Overcome hesitation with trust signals and gentle FOMO.

Email 3 — The Incentive (48 hours later)

Subject: Here's 10% off to complete your order

Now you bring out the incentive. Offer a small discount (10% or free shipping). Make it time-limited: 'This code expires in 24 hours.' Include cart contents again. This is your last shot — make it count.

Goal: Convert the price-sensitive buyers who need a push.

PRO TIP: Conditional Splits

In Klaviyo, add a conditional split based on cart value. If cart value is over \$100, offer free shipping instead of a percentage discount. If under \$100, offer 10% off. This maximises conversions while protecting your margins on high-value orders.

04 Flow #2: Welcome Series

Your welcome series is the first impression new subscribers get of your brand. It's also one of the highest-converting email sequences you'll ever send, with average open rates of 50% or higher.

Trigger: Someone subscribes to your email list (via popup, form, or checkout).

The 4-Email Sequence:

Email 1 — Immediate

Welcome + Deliver the Promise

Thank them for subscribing. Deliver whatever you promised (discount code, free guide, etc.). Tell your brand story briefly — who you are, what you stand for, why you exist. Keep it warm and personal.

Email 2 — Day 2

Social Proof + Best Sellers

Share customer reviews, press mentions, or user-generated content. Showcase your best-selling products with images and links. This builds trust and gives them a reason to browse.

Email 3 — Day 4

Education + Value

Share useful content related to your products — styling tips, how-to guides, ingredient breakdowns, or care instructions. Position your brand as an expert, not just a seller. This builds the relationship.

Email 4 — Day 6

Discount Reminder + Urgency

Remind them about their welcome discount if they haven't used it yet. 'Your 15% off code expires in 48 hours.' Include product recommendations based on what's popular. This is your conversion push.

05 Flow #3: Post-Purchase Follow-Up

Most Shopify stores stop communicating after the order confirmation. That's a huge mistake. The post-purchase period is when customers are most excited about your brand — it's the perfect time to build loyalty, drive reviews, and encourage repeat purchases.

Trigger: Customer places an order (Klaviyo 'Placed Order' event).

Email 1 — Immediate

Order Confirmation + Brand Touch

Go beyond the standard Shopify order confirmation. Add personality — thank them genuinely, set expectations for delivery, share a founder note or brand mission. Make them feel good about their purchase.

Email 2 — Day 3

Product Tips + Care Instructions

Share how to get the most out of their purchase. Styling tips, usage instructions, care guides. This reduces returns and increases satisfaction.

Email 3 — Day 7

Review Request

Ask for a product review. Make it easy — one-click star rating or a simple link. Social proof from real customers is marketing gold. Consider offering a small incentive (5% off next order) for leaving a review.

Email 4 — Day 14

Cross-Sell Recommendations

Recommend complementary products based on what they bought. 'Customers who bought [X] also loved [Y].' This is where repeat purchase revenue comes from.

PRO TIP: First-Time vs Repeat Buyer Split

Add a conditional split after Email 1: if this is their first purchase, emphasise your brand story and build the relationship. If they're a repeat customer, skip the intro and go straight to loyalty perks, VIP offers, or early access to new products. Different customers need different conversations.

06 Flow #4: Browse Abandonment

Browse abandonment targets a different group than cart abandonment. These are people who viewed specific products on your store but never added anything to their cart. They showed interest but didn't commit.

Trigger: Customer viewed a product but did NOT start checkout within 2 hours.

Condition: Only send to identified visitors (people Klaviyo can match to an email via previous activity or cookies).

The 2-Email Sequence:

Email 1 — 2 hours after browsing Still Thinking About It?

Show the exact products they viewed (Klaviyo dynamically populates these). Keep it casual and helpful, not pushy: 'We noticed you were checking out [Product]. Still interested?' Include product images, prices, and a direct link back.

Email 2 — 24 hours later These Won't Last Long

Add light scarcity or social proof: 'This is one of our best sellers' or 'Only X left in stock.' Optionally include a small incentive like free shipping. Keep it short — this is a nudge, not a sales letter.

07 Flow #5: Win-Back Campaign

It costs 5-7 times more to acquire a new customer than to retain an existing one. The win-back flow targets customers who bought from you before but haven't returned in a while. These people already trust your brand — they just need a reason to come back.

Trigger: Time since last purchase exceeds 60 days (adjust based on your typical repurchase cycle).

The 3-Email Sequence:

Email 1 — Day 60

We Miss You

Warm and personal. Remind them why they loved you in the first place. Show new products or bestsellers they haven't seen. No discount yet — just re-establish the connection.

Email 2 — Day 67

A Special Offer Just For You

Offer an exclusive comeback discount: 15-20% off or free shipping on their next order. Make it feel exclusive: 'This is only for our valued returning customers.' Include a time limit (7 days).

Email 3 — Day 74

Last Chance

Final reminder about the expiring offer. Be direct: 'Your exclusive discount expires tomorrow.' If they don't respond to this, move them to a 'sunset' flow to keep your list healthy.

08 The Quick-Start Checklist

Here's everything you need to implement the Revenue Recovery System on your Shopify store:

Setup

- Install Klaviyo from the Shopify App Store (free up to 250 contacts)
- Connect Klaviyo to your Shopify store (takes 2 minutes)
- Enable Klaviyo's onsite tracking (Active on Site) via the app embed
- Verify data is flowing: check Klaviyo Analytics > Metrics for Shopify events

List Growth

- Create an exit-intent popup offering 10-15% off for email signup
- Add an embedded signup form in your site footer
- Ensure checkout asks for email address (Shopify default)

Build the Flows (in this order)

- Flow 1: Abandoned Cart Recovery (3 emails — this is your money maker)
- Flow 2: Welcome Series (4 emails — converts new subscribers)
- Flow 3: Post-Purchase Follow-Up (4 emails — drives loyalty and reviews)
- Flow 4: Browse Abandonment (2 emails — catches warm leads)
- Flow 5: Win-Back Campaign (3 emails — reactivates lapsed customers)

Optimise

- A/B test subject lines on your abandoned cart flow (test for 2 weeks minimum)
- Monitor open rates, click rates, and revenue in Klaviyo Analytics
- Adjust send times based on when your audience is most active
- Clean your list monthly — suppress unengaged contacts to protect deliverability

09 Want It Done For You?

If you've read this playbook and thought 'this makes sense, but I don't have the time or expertise to set all of this up myself' — I've got you covered.

I offer a complete **done-for-you Revenue Recovery System** setup for Shopify stores. I build everything outlined in this playbook — all 5 flows, branded templates, popup forms, and 30 days of post-launch optimisation.

What's Included:

- ✓ All 5 automated Klaviyo flows (16+ emails total)
- ✓ Custom branded email templates matching your store
- ✓ High-converting popup and signup form setup
- ✓ 30 days of post-launch monitoring and A/B testing
- ✓ Klaviyo dashboard training video (so you understand your numbers)
- ✓ 30 high-converting subject lines swipe file

One-Time Investment: \$997

Full system built and live in 14 days. Your first recovered cart within 48 hours of launch.

The Guarantee: If the abandoned cart flow doesn't recover at least ONE sale within 30 days, I'll refund you in full — and you keep everything I built.

How to Get Started:

Step 1: Book a free 15-minute audit call at remotelyavailable.com

I'll look at your store and show you exactly how much revenue you're leaving on the table. No pitch, no pressure — just your numbers.

Step 2: Review the plan

I'll put together a custom plan for your store showing which flows will have the biggest impact and what results to expect.

Step 3: I build everything

Once you approve, I get to work. Full system built and live within 14 days. Your total time investment: one 15-minute call + one final review.

Stop losing revenue. Start recovering it.
